

**RO2073D**

**315.0 MHz  
SAW  
Resonator**

- **Ideal for 315 MHz Automotive-Keyless-Entry Transmitters**
- **Very Low Series Resistance**
- **Quartz Stability**
- **Complies with Directive 2002/95/EC (RoHS)**

The RO2073D is a true one-port, surface-acoustic-wave (SAW) resonator in a surface-mount, ceramic case. It provides reliable, fundamental-mode, quartz frequency stabilization of local oscillators operating at approximately 315 MHz. This SAW was designed for AM transmitters in automotive-keyless-entry applications operating in the USA under FCC Part 15, in Canada under DoC RSS-210, and in Italy.

**Absolute Maximum Ratings**

Rating	Value	Units
Input Power Level	0	dBm
DC Voltage	12	VDC
Storage Temperature	-40 to +85	°C
Soldering Temperature (10 seconds / 5 cycles max.)	260	°C

**SM3838-6 Case  
3.8 X 3.8**

**Electrical Characteristics**

Characteristic		Sym	Notes	Minimum	Typical	Maximum	Units			
Frequency (+25 °C)	Absolute Frequency	$f_C$	2, 3, 4, 5	314.900		315.100	MHz			
	Tolerance from 315.0 MHz	$\Delta f_C$							±100	kHz
Insertion Loss		IL	2, 5, 6		1.6	2.5	dB			
Quality Factor	Unloaded Q	$Q_U$			6500					
	50W Loaded Q	$Q_L$			1100					
Temperature Stability	Turnover Temperature	$T_O$	6, 7, 8	10	25	40	°C			
	Turnover Frequency	$f_O$								
	Frequency Temperature Coefficient	FTC							0.032	
Frequency Aging	Absolute Value during the First Year	f <sub>A</sub>	1, 6		10		ppm/yr			
DC Insulation Resistance between Any Two Terminals			5	1.0			MΩ			
RF Equivalent RLC Model	Motional Resistance	$R_M$	5, 7, 9		20.67	29	Ω			
	Motional Inductance	$L_M$			67.0		μH			
	Motional Capacitance	$C_M$			4.00		fF			
	Shunt Static Capacitance	$C_O$	5, 6, 9	3.5	3.65	4.5	pF			
Test Fixture Shunt Inductance		$L_{TEST}$	2, 7		64.6		nH			
Lid Symbolization				442 // YWWS						
Standard Reel Quantity	Reel Size 7 Inch			500 Pieces / Reel						
	Reel Size 13 Inch			3000 Pieces / Reel						

**CAUTION: Electrostatic Sensitive Device. Observe precautions for handling.**

**Notes:**

1. Frequency aging is the change in  $f_C$  with time and is specified at +65°C or less. Aging may exceed the specification for prolonged temperatures above +65°C. Typically, aging is greatest the first year after manufacture, decreasing in subsequent years.
2. The center frequency,  $f_C$ , is measured at the minimum insertion loss point,  $IL_{MIN}$ , with the resonator in the 50 Ω test system (VSWR ≤ 1.2:1). The shunt inductance,  $L_{TEST}$ , is tuned for parallel resonance with  $C_O$  at  $f_C$ . Typically,  $f_{OSCILLATOR}$  or  $f_{TRANSMITTER}$  is approximately equal to the resonator  $f_C$ .
3. One or more of the following United States patents apply: 4,454,488 and 4,616,197.
4. Typically, equipment utilizing this device requires emissions testing and government approval, which is the responsibility of the equipment manufacturer.
5. Unless noted otherwise, case temperature  $T_C = +25°C \pm 2°C$ .
6. The design, manufacturing process, and specifications of this device are subject to change without notice.
7. Derived mathematically from one or more of the following directly measured parameters:  $f_C$ , IL, 3 dB bandwidth,  $f_C$  versus  $T_C$ , and  $C_O$ .
8. Turnover temperature,  $T_O$ , is the temperature of maximum (or turnover) frequency,  $f_O$ . The nominal frequency at any case temperature,  $T_C$ , may be calculated from:  $f = f_O [1 - FTC (T_O - T_C)^2]$ . Typically *oscillator*  $T_O$  is approximately equal to the specified *resonator*  $T_O$ .
9. This equivalent RLC model approximates resonator performance near the resonant frequency and is provided for reference only. The capacitance  $C_O$  is the static (nonmotional) capacitance between the two terminals measured at low frequency (10 MHz) with a capacitance meter. The measurement includes parasitic capacitance with "NC" pads unconnected. Case parasitic capacitance is approximately 0.05 pF. Transducer parallel capacitance can be calculated as:  $C_P \approx C_O - 0.05 \text{ pF}$ .

## Electrical Connections

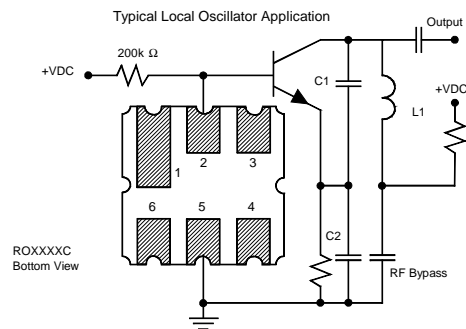

The SAW resonator is bidirectional and may be installed with either orientation. The two terminals are interchangeable and unnumbered. The callout NC indicates no internal connection. The NC pads assist with mechanical positioning and stability. External grounding of the NC pads is recommended to help reduce parasitic capacitance in the circuit.

Pin	Connection
1	NC
2	Terminal
3	NC
4	NC
5	Terminal
6	NC

J	1.70	1.8	1.90	0.067	0.07	0.075

## Typical Test Circuit

The test circuit inductor,  $L_{TEST}$ , is tuned to resonate with the static capacitance,  $C_O$ , at  $F_C$ .
