

Features:

- *Complete with all components to put a system "on the air"*
- *Accelerates the integration process*
- *Full technical support included with purchase*
- *Allows development of interface to your system*
- *Allows development of your control software*

Benefits:

- *Simple to set up and configure*
- *Accelerates the integration process*
- *Low cost solution for peer-to-peer, point-to-point, and point-to-multipoint designs*

The ZMN2405DK Pro Developer Kit comprises five low-power serial interface boards built around the 1mW ZigBee ZMN2405 module. The ZMN2405DK Pro allows developers to get up and running quickly using USB or RS-232 interfaces.

The self-contained modems have momentary switches, LEDs, thermistor, and potentiometer, and can operate on standard 9V alkaline batteries. This provides a simple, effective way to test the range and operation of the radios in a real-time environment. The onboard I/O can be disconnected, allowing user inputs to be connected to the module inputs using connectors.

The ZBDemo program included on the supplied CD allows the reading and writing of end device inputs and outputs, as well as network discovery and configuration. If your individual wireless requirements could benefit from the application of ZigBee technology, the ZMN2405 DK Pro is the premier first step.

The ZMN2405DK Pro should also be selected by those wishing to use the ZMN2430 module.

ZMN2405 DK Pro

Pro Zigbee[®] Developer Kit

Developer Kit Contents:

- *5 ea. evaluation boards*
- *5 ea. AC power adapters and cords*
- *5 ea. patch antennas*
- *5 ea. USB cables*
- *5 ea. serial cables*
- *5 ea. RF cables*
- *5 ea. omni antennas*
- *5 ea. 9V batteries*
- *1 ea. software CD*
